IMPORTANT:

- You need an available PCIe slot for installing the WiGig® card.
- You need to have 64-bit Windows® 7 SP1 or Windows® 10 on your computer.
- Before you start installing the wireless adapter, make sure you have successfully completed the setup for [VIVE](#) or [VIVE Pro](#).

Step 1

Install the PCIe WiGig card & wireless link box

Make sure to shut down your computer before installing the PCIe card and wireless link box. Scan the QR code here to get the instructions on your phone.

1. Unplug your computer.

Shut down your computer. Unplug the power cable and all other cables from your computer.

NOTE: Your computer may be hot if you've been using it for a long time. Wait for a few minutes to let the computer cool before removing its cover.

2. Install the PCIe WiGig card in your computer.

Insert the PCIe WiGig card in an available PCIe slot on your motherboard:

- The best fit is a x1 slot that is the same size as the card.
- If such a slot is not available, use a x4 slot.

NOTE: In very rare cases, depending on the brand of motherboard you're using, compatibility issues may occur. Please try other PCIe slots when this happens.
